

ACS-1803
Introduction to Information Systems

Instructor: Kerry Augustine

Enterprise Information Systems

Lecture Outline 6

Learning Objectives

1. Explain how organizations support business activities by using information technologies across the enterprise.
2. Explain Porter's Value Chain and how the model relates to the functional flow of goods and services within an organization.
3. Describe Supply Chain Management (SCM), Customer Relationship Management (CRM), and Enterprise Resource Planning (ERP) Systems. Describe how they relate to the Value Chain.

System Category – Enterprise Systems

Enterprise-wide Systems
aka **Enterprise Systems**, are systems that allow companies to integrate information across operations on a company-wide basis

Enterprise Resource Planning – Value Creation

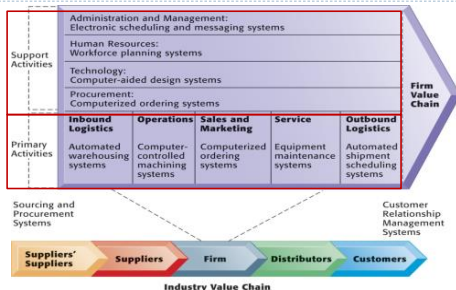

- ▶ An enterprise system is central to an organization
 - ▶ Ensures information can be shared across all business functions and all levels of management to support the running and managing of a business
- ▶ The ultimate goal is to satisfy customers and provide a competitive advantage by reducing costs and improving service
 - ▶ Create Value - transform inputs into outputs valued by the customer
 - ▶ Organizations create value by performing activities at lower cost or enhancing differentiation of products or services.
 - ▶ Information Systems streamline the processing of those activities

Business Value Chain

Managing materials, services and information from suppliers through to the organization's customers

Business Value Chain Analysis

Value Chain Analysis (Michael Porter 1985) is a process of analyzing an organization's activities to determine where value is added to products and/or services and what costs are incurred in doing so.

© 2018 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

Supply Chain Management (SCM)

- ▶ **Supply chain:** flow of materials, services and information from suppliers of merchandise and raw materials through to the organization's customers
- ▶ **Supply chain management:** processes and procedures used to ensure the delivery of goods and services to customers at the lowest cost while providing highest value to the customers

© 2019 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

13

Supply Chain Management (SCM)

Objective
Applications that accelerate product development and reduce cost associated with procuring raw materials, components, and services from its suppliers

- **Supply Chain** – the suppliers that an organization purchases from directly
- **Supply Network** – the suppliers that an organization purchases from directly and its suppliers

Sources
There are two primary sources of SCM systems. These systems are built to tightly integrate with ERP systems

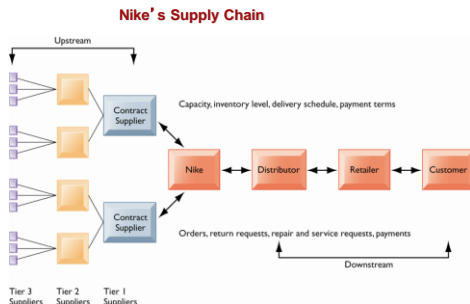

- **SCM Software Vendors** – Agile, Ariba, I2, Manugistics, Commerce One, etc.
- **ERP Vendors** – SAP, Baan, Oracle, etc

14

SCM – Example of a Supply Network

This figure illustrates the major entities in Nike's supply chain and the flow of information upstream and downstream to coordinate the activities involved in buying, making, and moving a product. Shown here is a simplified supply chain, with the upstream portion focusing only on the suppliers for sneakers and sneaker soles.

15

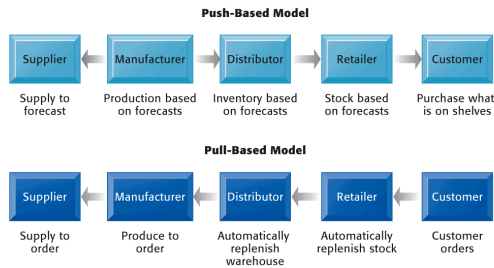

Supply Chain Management Benefits

Supply Chain Management applications can help organizations to gain competitive advantage and provide substantial payback in several ways by:

- Streamlining **workflow** and increasing **employee productivity** (i.e. efficiently managing business travel, time, and expenses by collaborating with suppliers in real time)
- Accelerating **product development** (i.e. enabled by the ability of organizations to swiftly react to market conditions)
- Streamlining **cost** and creating **efficiencies** across the supply network (i.e., supporting contract negotiation and measuring effectiveness of those agreements)

The Supply Network

Push- versus Pull-Based Supply Chain Models

The difference between push- and pull-based models is summarized by the slogan "Make what we sell, versus sell what we make."

The Supply Network

- ▶ **Push-based model**
 - ▶ Based on forecasts of demand for products, and products are "pushed" to customers
 - ▶ suppliers are gaining access to an organization's supply planning system to assure an ability to fulfill orders
- ▶ **Pull-based model**
 - ▶ Supply chain driven by actual customer orders or purchases
 - ▶ Producing organization is opening its systems to the customer to allow the customer to view inventory and production levels before placing orders

Customer Relationship Management (CRM) Systems

Managing materials, services and information from suppliers through to the organization's customers

19

Information Systems Roles in the Value Chain

Customer Relationship Management (CRM) Systems

20

Customer Relationship Management (CRM) Systems

- ▶ Capture and integrate customer data from all over the organization
- ▶ Consolidate and analyze the data
- ▶ Distribute results to various systems and customer touch points across the enterprise
- ▶ Provide a single touch point for the customer.

21

CRM Systems (con't)

CRM systems examine customers from a multifaceted perspective. These systems use a set of integrated applications to address all aspects of the customer relationship, including customer service, sales, and marketing.

CRM Systems (con't)

Business Value of Customer Relationship Management Systems

- ▶ Increased customer satisfaction
- ▶ More effective marketing and reduced direct marketing costs
- ▶ Lower costs for customer acquisition and retention
- ▶ Increased revenue from identifying most profitable customers and segments for marketing, cross-selling, up-selling
- ▶ Reduced churn rate (Number of customers who stop using or purchasing products or services from a company)

CRM Software

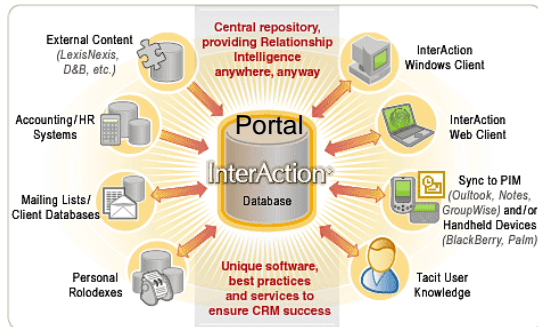

Customer Relationship Management (CRM) Software

- ▶ Can range from niche tools to large-scale enterprise applications
- ▶ Can link to other major enterprise applications, such as supply chain management

Enterprise Resource Planning (ERP) Systems

Managing materials, services and information from suppliers through to the organization's customers

31

Enterprise Resources Planning (ERP) Definition

- ▶ **Enterprise Resource Planning**
 - ▶ A method for the effective planning and controlling of ALL these sources needed to take, make, ship and account for customer orders in a manufacturing, distribution or service company.
 - ▶ Remember the evolution of MRP into ERP?

33

ERP Software (con't)

- ▶ **Enterprise Resource Planning (ERP) Systems**
 - ▶ Software is developed around predefined business processes
 - ▶ Firms select functions needed, then map to the predefined processes in the software
 - ▶ Best practices are the most successful solutions or problem-solving methods for consistently achieving an objective

© 2010 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

37

ERP Software - SAP

- ▶ Based in Germany, now worldwide
 - ▶ Support for international transactions and multinational firms
 - ▶ Runs on multiple database and hardware platforms
 - ▶ Can handle large and small companies
 - ▶ Expensive, but price is relative.
- ▶ Financials
 - ▶ Supply Chain Mangement
 - ▶ CRM
 - ▶ Human Resources Management

© 2010 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

38

ERP Software

- ▶ **Business Value of Enterprise Systems**
 - ▶ [A more uniform organization \(What is SAP\)](#)
 - ▶ More efficient operations and customer-driven business processes
 - ▶ [Firm-wide information for improved decision making \(SAP – Building Loyalty with your Most Profitable Shoppers\)](#)
 - ▶ [Enterprise Mobile Functionality \(How E-Commerce is Changing the Shopping Experience\)](#)

39

ERP Software

▸ Issues and Challenges in Implementing ERP Systems

- Business must align processes to the ERP system
- ERP systems cross organizational boundaries

© 2019 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

40

ERP Strategy Considerations

- High initial cost
- High cost to maintain
- Future upgrades
- Training

© 2019 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

41

ERP Strategy Considerations

Control refers to where the power lies related to computing and decision support systems (centralized vs. decentralized) in selecting systems, developing policies and procedures, etc. (Who will decide?)

Business Requirements refers to the system's capabilities and how they meet organizational needs through the use of **software modules** or groups of business functionality (What do you need?)

Best Practices refers to the degree to which the software incorporates **industry standard methods** for doing business which can cause a need for significant **business processes reengineering** (How much change is required?)

42

Choosing an ERP System – Selection Factors

- ▶ Technology alone is often not enough to make companies more efficient, competitive, or quality oriented.
- ▶ Organizational changes are often necessary, from minor changes in work habits to redesigning entire business processes.
- ▶ **BPM: Business process management**
 - ▶ Aims to continuously improve processes
 - ▶ Uses variety of tools and methodologies to:
 - ▶ Understand existing processes
 - ▶ Design and optimize new processes

© 2019 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

43

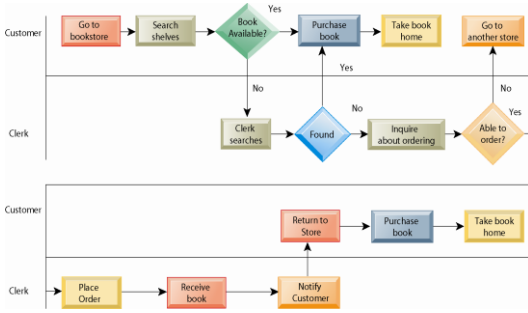

Choosing an ERP System – BPM

- ▶ Steps in BPM
 1. Identify processes for change.
 2. Analyze existing processes.
 3. Design new process.
 4. Implement new process.
 5. Continuous measurement.

46

Recommendations for Enterprise System Success

Secure Executive Sponsorship

The highest level support is required to obtain resources and make and support difficult reengineering decisions

Get Help from Outside Experts

Implementation success is enabled by deep application experience and access to supporting tools and methods

Thoroughly Train Users

Training in organization, business process, and application functions is critical to success and must be reinforced

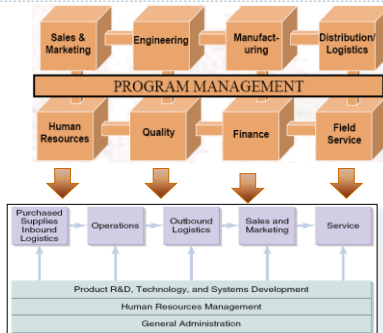

Take a Multidisciplinary Approach to Implementations

Enterprise systems span the entire organization and as such require input and participation from all functions

47

Typical ERP Functionality - Value Chain

© 2010 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

48

Sales and Operations Planning

- ▶ Balance market demand with resource capability
- ▶ Develops a contract between Manufacturing and Marketing
- ▶ A single set of numbers upon which to base plans and schedules
- ▶ Manages Inventory and Backlog
- ▶ Forecasting

© 2018 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part. 49

Engineering

- ▶ Document Creation, Management & Control
- ▶ CAD Interface / Image Management
- ▶ Configuration Management
 - ▶ Change Order Creation & Control
 - ▶ Revision Control
- ▶ Engineering Data Management
- ▶ Product Information Management
- ▶ Technical Data Management
- ▶ Technical Information Management
- ▶ Engineering Item Data & BOMs

© 2018 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part. 50

Manufacturing

- ▶ MRPII Functionality
 - ▶ MPS, BOM, Routings, MRP, CRP
- ▶ Integrated Production Configuration
- ▶ Statistical Inventory Control
- ▶ Sales & Operations Planning
- ▶ Flexible Product & Job Costing Options
- ▶ Just-in-Time (JIT)

© 2018 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part. 51

Distribution / Logistics

- ❖ Purchasing
- ❖ Supplier Reliability Analysis
- ❖ Distribution Requirement Planning
- ❖ Global Transportation Management
- ❖ Fleet Management
- ❖ Shipping & Receiving
- ❖ Import / Export
- ❖ Warehouse Management

© 2019 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

Human Resources

- ▶ Requisition Management
- ▶ Applicant Tracking
- ▶ Employee Master
- ▶ Job Descriptions
- ▶ Employee Evaluations
- ▶ Training & Certification Management
- ▶ Payroll Deduction Accounting
- ▶ Benefits Tracking

© 2019 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

Quality

- ▶ Quality Management Plans
- ▶ Quality Specifications / Requirements
- ▶ Test / Inspection Results
- ▶ Cause and Corrective Action Tracking
- ▶ Process / Product Certification
- ▶ Statistical Quality Control
- ▶ Cost of Quality Reporting
- ▶ Equipment & Tool Calibration

© 2019 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

Finance

- ▶ Financial Budgets
- ▶ General Ledger
- ▶ Accounts Payable
- ▶ Accounts Receivable
- ▶ Payroll
- ▶ Fixed Assets
- ▶ Cash Management
- ▶ Activity Based Costing
- ▶ Financial Statements

© 2010 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.

Field Service

- ▶ Installation Management
- ▶ As-maintained BOM (Bill of Materials)
- ▶ Warranty Tracking
- ▶ Preventative Maintenance Scheduling & Control
- ▶ Service Order Planning & Control

© 2010 Cengage Learning®. All Rights Reserved. May not be scanned, copied or duplicated, or posted to a publicly accessible website, in whole or in part.
